Professional Summary

Economist and analytics professional with 4+ years of experience combining quantitative research, business strategy, and operations. Applies statistical modeling, forecasting, and experimentation to solve business problems, guide strategic decisions, and improve organizational performance. Experienced in translating analytical findings into measurable results.

Experience

The Tony Kinnett Cast **Aug 2024 to Present**

Executive Producer *Indianapolis, IN (Remote)*

- Co-lead production, audience growth, and content strategy for a nationally syndicated program, coordinating four contractors across booking, research, editing, and distribution.
- Helped grow weekly views from under 50,000 to over 1 million by optimizing content structure, pacing, format, and distribution using audience retention, click-through, and discovery data.
- Designed and evaluated content and monetization experiments using cohort analysis and A/B testing to improve audience retention and inform programming decisions.
- Built a Python ETL pipeline integrating Nielsen, YouTube, X, and Megaphone data into PostgreSQL, reducing manual reporting effort by 50%.

The Daily Signal **Oct 2024 to Dec 2025**

Data Consultant *Washington, D.C. (Remote)*

- Built a Python pipeline ingesting CSV and API data from seven platforms (Chartbeat, GA4, Facebook, Instagram, X, YouTube, Megaphone), automating cleaning, feature engineering, and KPI computation for leadership reports.
- Contributed to first-six-month lifts of +45% website traffic and +170% YouTube views.
- Surfaced statistically significant publishing and content performance patterns using causal inference methods (OLS, t-tests, Mann-Whitney U, Prophet), translating findings into actionable editorial recommendations.
- Applied k-means clustering, NLP, and TF-IDF modeling to classify content by topic and engagement outcome, identifying high-performing themes and enabling effort reallocation.

Chalkboard Review **Nov 2020 to Nov 2022**

Data & Analytics Coordinator *Remote*

- Developed Excel, Power BI, and Tableau dashboards to track audience engagement, content performance, and platform growth, supporting editorial and marketing decisions.
- Produced recurring analytics reports as readership reached 500,000 monthly users and social distribution grew to 2.2 million monthly Twitter impressions.

Education

George Mason University **Aug 2024 to May 2026**

MA, Economics (GPA: 4.0); CHSS Outstanding Graduate Student Honoree

Lenoir-Rhyne University **Aug 2021 to May 2024**

BA, Economics with Honors; Minor in Finance (GPA: 4.0)

- Senior honors thesis presented at the 50th Annual Eastern Economic Association Conference

Projects

- **Real-Time Reliability of First-Release Nonfarm Payroll Estimates (2026).** Analyzed 300 months of vintage payroll data using interrupted time series, estimating a 168K-job increase in revision magnitude and a 39pp rise in tail-event probability following COVID onset. Developed quantile gradient boosting models with vintage-safe predictors and leakage audits.
- **Are MLB Teams Spending Smarter? (2025).** Built a PostgreSQL and Python pipeline integrating Lahman and Neil Paine WAR data. Used regression analysis to evaluate payroll efficiency, finding that payroll explained approximately 12% of variation in wins and identifying substantial differences in spending efficiency across teams.
- **User Behavior and Citi Bike (2023).** Analyzed 362K NYC bike-share trips using hypothesis testing and behavioral segmentation, identifying statistically significant differences in trip duration and station usage.

Skills

Languages & Databases: SQL, Python, R, Stata, PostgreSQL, database management, Git/GitHub, LaTeX, Jupyter

Analytics & Modeling: econometrics, causal inference, statistical modeling, predictive modeling, hypothesis testing, time-series forecasting, A/B testing, machine learning, clustering, classification, NLP, TF-IDF, data visualization

Libraries & BI: pandas, NumPy, scikit-learn, statsmodels, XGBoost, Prophet, matplotlib, ggplot2, Tableau, Power BI

Data & Management: ETL pipeline design, data engineering, KPI reporting, sponsor relations, team leadership
