Experience

The Tony Kinnett Cast

Growth Analytics Consultant

Aug 2024–Present

Indianapolis, IN (Remote)

- Identified underperforming monetization channels by analyzing advertising, membership, and donation revenue streams against audience behavior and platform attribution data, enabling go-to-market prioritization decisions that contributed directly to growth reaching five-figure monthly recurring revenue.
- Diagnosed content structure weaknesses in hook performance, pacing, and ad placement timing using view duration, click-through, and SEO discovery data, then tested structural changes that contributed to an $\sim 8\times$ increase in views.
- Eliminated fragmented manual reporting by designing a Python-based ETL pipeline integrating Nielsen, YouTube, X, and Megaphone data into PostgreSQL, consolidating cross-platform performance analysis and reducing manual reporting effort by 50%.
- Identified content and monetization experiments that drove statistically significant retention gains through cohort analysis and A/B testing, reducing reliance on intuition-driven decisions.

The Daily Signal

Data Consultant

Oct 2024–Dec 2025

Washington, D.C. (Remote)

- Replaced a manual reporting process by engineering a Python-based analytics pipeline ingesting monthly CSV and API data from seven platforms (Chartbeat, GA4, Facebook, Instagram, X, YouTube, Megaphone), automating cleaning, feature engineering, and KPI computation for leadership-facing performance reports.
- Drove platform growth through data-driven recommendations, contributing to first-6-month lifts of +45% website traffic, +1,430% Facebook reach, +430% X impressions, and +170% YouTube views.
- Surfaced statistically significant publishing and content performance patterns using OLS, t-tests, Mann–Whitney U, and Prophet, translating findings into actionable editorial recommendations.
- Reduced content strategy guesswork by applying k-means clustering and TF-IDF topic modeling to classify content by topic and engagement outcome, identifying high-performing themes and enabling reallocation of distribution effort.

Chalkboard Review

Data & Analytics Coordinator

Nov 2020–Nov 2022

Remote

- Built and maintained dashboards in Excel, Power BI, and Tableau tracking website and social KPIs, giving editorial and marketing teams visibility into growth trends as the organization scaled to 500K monthly readers.
- Delivered recurring analytics reports using Google Analytics, Facebook, and Twitter data identifying content formats driving disproportionate traffic, contributing to scale of 2.2M monthly Twitter impressions and 120K Facebook reach prior to acquisition.

Education

George Mason University

MA, Economics (GPA: 4.0)

Aug 2024–May 2026 (Expected)

Lenoir-Rhyne University

BA, Economics with Honors; Minor in Finance (GPA: 4.0)

Aug 2021–May 2024

Projects & Skills

- **Real-Time Reliability of First-Release Nonfarm Payroll Estimates** — Applied quasi-causal interrupted time series to March 2020 COVID onset; estimated +168K-job level shift in revision magnitude and +39pp jump in tail-event probability persisting 57 months post-shock; built machine learning quantile regression models (75th–95th percentile) with vintage-safe predictors and leakage audits.
- **Are MLB Teams Spending Smarter?: An ROI Analysis of Payroll vs. Performance** — Built SQL + Python pipeline integrating Lahman & Neil Paine WAR datasets; regression showed payroll explained only $\sim 12\%$ of wins, with diminishing returns above $\sim \$150\text{M}$. Identified small-market teams (Rays, A's) achieving $\sim 3\times$ efficiency.
- **User Behavior and Citi Bike: A Study of Behavioral Economics and Data Analytics** — Analyzed 30M+ NYC bike-share rides in R with geospatial mapping and hypothesis testing; uncovered significant differences in distance, duration, and station choice, informing pricing and access policy.
- **Skills:** SQL, Python, R, Tableau, Power BI, Git/GitHub, LaTeX, pandas, NumPy, scikit-learn, XGBoost, matplotlib, ggplot2, Prophet, econometrics, statistical modeling, machine learning, time-series forecasting, clustering, classification, A/B testing, ETL pipeline design, data engineering, data visualization, database management
